

RETAIL DEVELOPMENTS

UNILOCK
DESIGNED TO CONNECT

UNIQUE PROJECT CHALLENGES, **UNILOCK** HAS THE SOLUTION.

The high traffic nature of retail developments produces unique landscape challenges. The following are just a few examples of how Unilock products can help provide solutions.

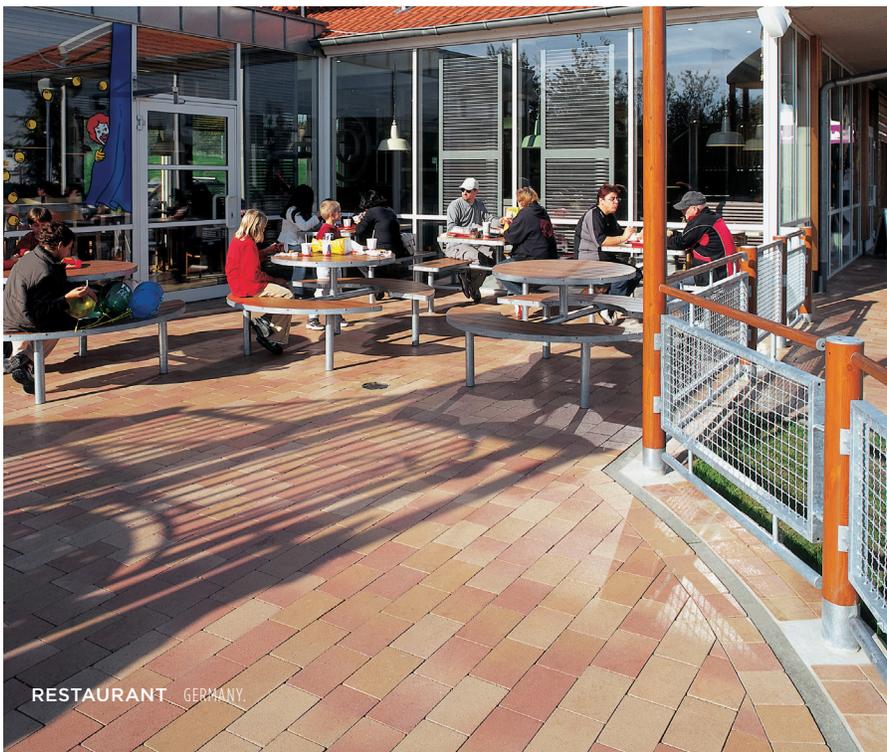

SHOPS AT DON MILLS TORONTO, ONTARIO

< STREETSCAPES

CHALLENGE: *This upscale shopping area in Toronto, Canada required paving for vehicular and pedestrian areas that could handle the demands of daily traffic in all four seasons.*

SOLUTION: Unilock Umbriano® provided the premium contemporary feel the developer was looking for. ColorFusion™ Technology in Umbriano randomly disperses color and granite particles for the appearance of natural granite in a surface that resists stains. With a wide selection of paver colors, sizes and textures, built to handle both vehicular and pedestrian demands, there is a Unilock product to suit any streetscape project.

RESTAURANT GERMANY

< HEAVY USE PEDESTRIAN

CHALLENGE: *This outdoor eating area required a pavement that could handle a continuous stream of pedestrian traffic and be easily cleaned.*

SOLUTION: The color in Unilock EnduraColor™ products will never fade and EnduraColor™ Plus Architectural Finishes products offer a variety of additional technologies that further improve long term durability. In this project, the chosen product was Senzo® with EasyClean™, a proprietary technology that makes dirt and grease easier to remove before stains can set in.

BARCLAYS CENTER ARENA BROOKLYN, NEW YORK.

< PLAZA & SITTING AREA

CHALLENGE: Open gathering spaces provide a welcome relief from the intensity of densely packed retail shops, but can be a challenge to design in an interesting way and difficult to keep looking clean.

SOLUTION: This expansive plaza in Brooklyn, New York was designed with a range of Unilock paver sizes and colors for dynamic impact. Unilock products like this, with EasyClean™ Technologies are easy to clean options that don't compromise on style.

WHOLE FOODS MARKET NAPERVILLE, ILLINOIS.

< PARKING LOTS AND STORMWATER MANAGEMENT

CHALLENGE: To maximize saleable land, many developers are looking for cost efficient alternatives to the traditional detention pond as a means to manage storm water. As well, some municipalities have placed restrictions on the amount of non-permeable area for new developments.

SOLUTION: This retail development in Illinois used Unilock permeable pavers to effectively deal with storm water runoff from the large parking lot. From heritage to contemporary, Unilock permeable products offer an extensive range of colors and styles that meet rainwater management specifications. In addition, some of these products are also ADA (Americans with Disabilities Act) compliant making them ideal for public spaces.

BMW DEALERSHIP WHITBY, ONTARIO.

< PAVING WITH FORM AND FUNCTION

CHALLENGE: This car dealership required paving that created a welcoming landscape in keeping with their premium brand image, and when necessary could handle the weight of vehicles on display outside.

SOLUTION: Unilock Series 3000* is a sophisticated paver with a high-performance surface made from a combination of granite and quartz aggregates. A mix of light and dark grey tones were used to define pedestrian areas and create vehicle display pads. Unilock offers a complete array of architectural finishes and color options to suit the brand identity and functional requirements of any retail enterprise.
